For some reason, I actually don't like the new interface as much. The menus of the new program are pretty straightforward but there is not as much space between them as in prior releases. The work in progress editing features in my opinion are a nice addition but the new download feature is a little confusing. (SSDs are faster than Hard drives). The new interface is not too bad though, it just doesn't seem that intuitive after working with Photoshop for many years. Overall, it appears that the workflow once again reverted step back a bit and now I just don't see the "why" it was supposed to be so advanced. Plus to top it all off they decided to sell this new program outright for \$30 so I am forced to use these darned new features. Not complaining but this is the part as a frequent buyer that I am not happy about. I also noticed that there is no longer a proper plug-in for the older ones like Adobe Enfuse 9 so that I can still use some of my older PSD files with it. I would consider that a screw up. There is however a free plug in which you can use for Enfuse. It's available at their website. While I'm a bit jaded on Photoshop & CC improvements, the new features are very easy to use and take a whole lot of my time up. In particular things like generating selections & smart guides make things much easier and I still do enjoy the pure editing tools. Admittedly, I do find the new gradient tool to be rather sluggish. In a perfect world I would love to see the different types of gradients just as easy to use & they could all still live in their own tab in the history panel. The new 'convert to curves' is also a great feature and fast. Darkroomgrade even chimed in so thank them as well!
